Breast cancers are derived from the epithelial cells that line the terminal duct lobular unit. Cancer cells that remain within the basement membrane of the elements of the terminal duct lobular unit and the draining duct are classified as in situ or non-invasive. An invasive breast cancer is one in which there is dissemination of cancer cells outside the basement membrane of the ducts and ...

## **ABC of Breast Diseases (ABC Series): Amazon.co.uk: Dixon ...**

Neonatal breast infection is most common in the first few weeks of life when the breast bud is enlarged. Although *Staphylococcus aureus* is the usual organism, *Escherichia coli* is occasionally the pathogen. If an abscess develops the incision to drain the pus should be placed as peripheral as possible to avoid damaging the breast bud.
